Online Account Context

Broad repertoire choices match: heavy 1.e4 as White and 1...e5 versus 1.e4, with 1...Nf6/d-pawn structures against 1.d4 especially in slower Chess.com games. The all-games sample has many blitz/bullet experiments such as Englund/Petroff sidelines, so it is not a clean one-to-one OTB match but not contradictory.

Stockfish Sample

Stockfish 17.1 depth 8 sampled 56 games and 1597 target moves. Average loss was 0.42 pawns; serious-error rate 10.8%; blunder-rate 3.1%.

Strengths

- Huge recent sample and very high activity; he is unlikely to be rusty.
- Comfortable in tactical 1.e4 positions and practical online-style complications.
- He has enough games on both sides to adapt if the opening leaves theory early.

Weaknesses To Test

- The Chess.com sample is noisy: blitz/bullet choices are broad and not all should be trusted as classical repertoire.
- High activity can come with automatic moves; structured positions that require patience are a good practical test.
- Because his repertoire is broad, specific forcing prep should target repeated OTB lines, not random online experiments.

Your Strategy

- Do not try to out-randomise him. Choose a sound line, keep time, and make the position ask for calculation on your terms.
- With Black, be especially ready for 1.e4 and for him to choose the most active piece setup available.
- With White, aim for a structure where your plan is clear by move 10; then make him prove the tactical break actually works.

Method

Opening and result statistics were calculated from the deduped combined app-side OTB prep PGN. Original source bucket counts are kept only as collection provenance and can exceed the final unique game total. Stockfish sampling checked target-side moves from move 5 onward in recent and result-diverse OTB games. Chess.com account comments use the existing Southall opening-comparison audit and are not merged into the OTB statistics unless explicitly stated.
